All prices are ex. 21% VAT

How to prepare your premaster?

- Make sure you don't have any limiters, compressors or other dynamic processors on your master channel.
- Leave at least 6db headroom between your loudest peaks and the 0db ceiling of your master channel.
- Make sure there is enough room at the start and end of your track for fade ins and outs.
- Export your premaster files in 24bit 44.1kHz.
- Check your premaster for mistakes. Listen to all versions in total. Revisions that need to be done based on your own mistakes will be charged as a new master.
- Upload your premaster files on dropbox or wetransfer and send us the link(s) using the form on our website.

What are social media versions?

All our master deliveries contain free social media versions. These files are mastered with different loudness settings to make sure they translate best on services with automatic loudness compensation like soundcloud, youtube, spotify, itunes etc.

Do I have to pay extra for radio edits or extended versions?

No, up to 2 extra edits of the same track are delivered to you for free. For instance if you deliver an extended, radio and social media edit this will be seen as one master. However all the edits must have the same volume levels and mixdown. Remixes will be handled as separate masters.

Master Delivery

All master files will be delivered digitally in 16bit 44.1kHz.
